Create Indexed Point Cloud

This example triggers the processing of a raw point cloud. This creates a new Indexed Point Cloud.

```
# Create a processed point cloud
# The variable "pc_id" contains the ID of a raw point cloud
# The variable "crs" contains the CRS of the project

result = vf.create_entity_processed(
    project=project,
    type=vf.entity_type.IndexedPointCloud,
    name="My Indexed Point Cloud",
    fields={
        'source': pc_id,
    },
    crs=crs)
if not result.success:
    print(result.error_info)
    exit()
idxpc_id = result.id
print('Indexed point cloud created ' + idxpc_id)
```
