

Process Block Model

The following example processes a Block Model.

```
# Create a block model
# The variable "rawbm_id" contains the ID of a raw Block Model
# The variable "crs" contains the CRS of the project

result = vf.create_entity_processed(
    project=project,
    type=vf.entity_type.BlockModel,
    name="Block Model",
    fields={
        'source': rawbm_id,
    },
    crs=crs)
if not result.success:
    print(result.error_info)
    exit(5)
bm_id = result.id
```
