

# Creating a Report

To create a new Report entity, go to the Project Catalog, browse to the Folder that you want to contain the Report, and click on the "Add" button.

This will display a list of Entities to add. Chose "Report" from the list:

This will display a modal dialog prompting for information about the report:

Name	Provide a name for the report
Region	Select one of the regions available in the Project as the scope where the Report will run. Visit the <a href="#">Working with Regions</a> section to see how to define a new region.
Resolution	Allows to select the voxel resolution that will be used to compute the Report.
Program	Select which Report Program will be used to compute the Report. For more about these special programs, see the <a href="#">Report Programs</a> section.  Based on the input expected by the program, the dialog will contain other custom input fields.

Click on the "Create" button to start the Report. While it is computed, the Report will appear list in the "Pending" section of the Project.

Once the report completes, it will become accessible for viewing and downloading.
